**Portfolio rebalancing due to short term defensive considerations:**

Subject to the SEBI (MF) Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. The Scheme may actively deviate from the stated asset allocation pattern outlined in the SID during extenuating circumstances. These instances may be beyond the control of the fund manager & the AMC and hence may require such deviations. Such changes in the investment pattern will be transitional in nature and will be undertaken as defensive considerations only in accordance with Para 1.14.1.2 of SEBI Master circular for Mutual Fund and as amended from time to time. Defensive considerations may be determined by the fund manager and /or AMC from time to time. In case of deviations on account of exogenous factors, the fund manager will endeavour to rebalance the Scheme within 30 calendar days from the date of such deviation. The intention being at all times to seek to protect the interests of the Unit holders.

**Portfolio rebalancing due to passive breaches:**

In case of passive deviation from the asset allocation pattern or various prudential limits prescribed under SEBI (Mutual funds) regulations, 1996 and circulars issued thereunder the AMC shall follow process specified in Para 2.9 of SEBI Master circular for Mutual Fund as amended from time to time. In line with the circular, in the event of deviation from the mandated asset allocation limits mentioned in the SID or the prudential limits due to passive breaches such as corporate action, substantial rise/ fall in the price of an underlying scrip, maturity of any underlying security, large redemptions, etc., the portfolio would

	<p>be rebalanced within 30 business days from the date of deviation. Where the portfolio is not rebalanced within mandated timelines, justification in writing including details of efforts taken to rebalance the portfolio shall be placed before the Investment Committee. The Investment Committee, if so desires, can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period. In case the portfolio of the Scheme is not rebalanced within aforementioned mandated plus extended timelines AMC shall adhere to the requirements as laid down in the aforesaid SEBI circular. However, at all times, the portfolio will adhere to the overall investment objective of the scheme.</p>
<p><b>Investment Strategy</b></p>	<p>The scheme follows an active investment strategy.</p> <p>The Scheme to generate stable returns by investing in debt &amp; money market instruments across the yield curve &amp; credit spectrum. However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns. The fund manager will endeavour, through a process of robust credit risk assessment &amp; research, to identify optimum credit opportunities in the market and invest in such instruments offering higher yields at acceptable levels of risk.</p> <p>Axis Credit Risk Fund is a fixed income fund which will endeavor to generate stable returns by investing in debt &amp; money market instruments across the yield curve &amp; credit spectrum. This fund will have the ability to maintain a relatively higher exposure to fixed income instruments which are not AAA &amp; equivalent.</p> <p>The fund endeavors to take advantage of opportunities arising from the credit spectrum. Historically, the spread between AAA and AA is dynamic and changes over time. The fund manager can dynamically change the portfolio credit composition to take advantage of these opportunities.</p> <p>The fund proposes to take advantage of opportunities arising from the credit spectrum. Some of the strategies that we may follow are as follows:</p> <ol style="list-style-type: none"> <li>1) Opportunity from credit spreads between AAA and AA rated fixed income instruments</li> <li>2) Opportunity from migration of ratings</li> </ol> <p>The above are some examples of credit strategies currently available in the Indian fixed income markets. The fund will endeavor to use other credit strategies across the spectrum as &amp; when they are available in the Indian markets.</p> <p>Further there is an opportunity from the migration of ratings. Through the Axis credit process, we endeavor to avoid taking exposures where there is a risk of downgrade and take exposure in cases where we think there is a potential for an upgrade. The fund will aim to take advantage of these opportunities from credit spreads as well as potential from rating migrations.</p> <p>The fund manager will try to allocate assets of the scheme between various fixed income instruments taking into consideration the prevailing interest rate scenario, the liquidity of the different instruments and maintain a diversified portfolio with the objective of achieving stable risk adjusted returns. While investing the fund manager will keep in mind the yield structure of different asset classes (e.g. the sovereign yield curve and the corporate bond yield curve) as well as kinks within a particular yield curve (e.g. the different points of the sovereign yield curve).</p> <p>After doing a thorough research on the general macroeconomic condition, political environment, systemic liquidity, inflationary expectations, corporate performance and other economic considerations the portfolio duration and credit exposures will be decided.</p> <p>For derivatives strategy, please refer to the SID.</p>

<b>Risk Profile of the Scheme</b>	<p>Mutual Fund units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.</p> <p><b>Scheme specific Risk Factors are summarized below:</b></p> <p>The scheme carries risks associated with investing in debt and money market securities, derivatives, Foreign Securities, securitized debt, short selling, debt instruments having credit enhancements and securities lending.</p> <p>Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Trading volume may restrict liquidity. The AMC may choose to invest in unlisted securities which may increase the risk on the portfolio. Also, the value of the Scheme investments may be affected by currency exchange rates, changes in law/policies of the government, taxation laws and political, economic or other developments.</p> <p>Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk, creation of segregated portfolio, etc.</p> <p>Please read the SID carefully for details on risk factors before investment.</p> <p>Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF): CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified open ended MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfil liquidity obligations under stress situation.</p> <p>Investors are requested to read detailed disclosure on investment of the schemes in the CDMDF as mentioned in relevant section of SID.</p>				
<b>Risk Mitigation strategies</b>	<p>Interest rate risk is managed by a meticulous determination of the average maturity of the portfolio. Extensive analysis of macro economic conditions is done to form a view on future interest rates and to position the portfolio accordingly. Credit risk is managed by in-depth analysis of issuer (financial/operating performance) with the help of internal and external research. Liquidity risk is addressed by maintaining exposure to cash/cash equivalents and highly liquid instruments.</p> <p>For more details, please refer SID.</p>				
<b>Creation of Segregated Portfolio</b>	<p>In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI regulations/ circulars. For more details, kindly refer SID &amp; SAI.</p>
