### Part III. OTHER DETAILS

#### A. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. Separate NAV will be calculated and disclosed for each Option.

The NAVs will be calculated and disclosed on all the Business Days.

#### Illustration of Computation of NAV:

The computation of NAV per unit using various components is explained as follows:

<b>Particulars</b>	<b>Amount in Rs</b>
Market or Fair Value of Scheme's Investments.... (A)	10,00,00,000.00
Add: Current Assets including Accrued Income... (B)	75,34,345.00
Less: Current Liabilities and Provisions. .... (C)	(30,00,000.00)
<b>Net Assets (A+B-C)</b>	<b>10,45,34,345.00</b>

No. of Units outstanding under Scheme on the Valuation Day: 100,00,000

The NAV per unit will be computed as follows:  $10,45,34,345.34 / 100,00,000 = \text{Rs. } 10.4534$  per unit (rounded off to four decimals)

Disclosure pertaining to illustration on computation of NAV and Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme.

#### **SPECIAL CONSIDERATIONS**

The investors will bear the recurring expenses of the Underlying Fund in addition to the recurring expenses charged by Axis Nifty AAA Bond Plus SDL Apr 2026 50:50 ETF FOF.

## Section II

### I. Introduction

#### A. Definitions/interpretation

For details refer website of Axis Mutual Fund: <https://www.axismf.com/statutory-disclosures>

#### B. Risk factors

##### **Scheme Specific Risk Factors**

##### **Risks associated with investments in Units of Mutual Fund schemes**

The Scheme will invest in units of Axis AAA Bond Plus SDL ETF – 2026 Maturity and money market instruments. Hence the performance of the Scheme would depend upon the performance of the underlying scheme. Any change in the investment policies or fundamental attributes of the underlying scheme will affect the performance of the Scheme.

Investment in the debt schemes will have all the risks associated with the debt markets including price risk, credit risk and reinvestment risk.

Periodical rebalancing could result in higher transaction costs.

This being a Fund of Funds scheme, the investors are bearing the recurring expenses of the Scheme in addition to the expenses of underlying scheme in which the Scheme shall make investment. However, in line with the SEBI Regulations, the total expense ratio of the Scheme including weighted average of the total expense ratio levied by the underlying scheme shall not exceed the eligible percent of the daily net assets of the Scheme.

##### **Risks associated with Investment in Exchange Traded Funds**

The Scheme are subject to the principal risks described below. Some or all of these risks may adversely affect Scheme's NAV, trading price, yield, total return and/or its ability to meet its objectives. These risks are associated with investment in debt securities.

##### **Risks associated with investments in Fixed Income Securities**

**Interest-Rate Risk:** Fixed income securities such as government bonds, corporate bonds, money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

**Re-investment Risk:** Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

**Basis Risk:** The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

**Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

**Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

**Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Schemes' investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of

divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

**Credit Risk:** This is the risk associated with the issuer of a debenture/bond or a Money Market Instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

**Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

#### **Risks associated with Repo transactions in Corporate Bonds**

The Scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo transactions, the collateral may be sold and a loss is realized only if the sale price is less than the repo amount. The risk is further mitigated through over-collateralization (the value of the collateral being more than the repo amount).

#### **Risks associated with Segregated Portfolio**

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
2. Security comprises of segregated portfolio may not realise any value.
3. Listing of units of segregated portfolio on recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

#### **Risks associated with transaction in Units through stock exchange(s)**

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

### **C. Risk mitigation strategies**

#### **Risk Control**

The fund will be passively managed to track the performance of the benchmark of the underlying Scheme i.e. Nifty AAA Bond Plus SDL Apr 2026 50:50 Index by investing in units of Axis AAA Bond + SDL ETF – 2026 Maturity (underlying Scheme).

As a risk mitigation measure for portfolio volatility, the fund will endeavour to remain fully deployed to keep the performance deviation from the underlying funds at the minimum.

For managing the liquidity risk, fund manager may keep some portion of the portfolio in debt and money market instruments and/or cash within the specified asset allocation framework for the purpose of meeting redemptions. The liquidity would be monitored and necessary action would be taken on the portfolio as and when required.

As a risk control measure for investment strategy, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process, which would be periodically evaluated. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. Necessary systemic controls have been put in place for pre-emptive monitoring of such SEBI norms and also to monitor other relevant risk parameters

**Market Risk:** The scheme is vulnerable to movements in the prices of US treasury securities invested by the underlying scheme, which could have a material bearing on the overall returns from the scheme. Investments in US treasury securities are subject to price fluctuation on daily basis.

Mitigation - ETFs being passively managed carry lesser risk compared to active management. The underlying ETF scheme(s) where the Scheme intends to invest follow the underlying benchmarks and therefore the level of portfolio volatility would be same as that of the underlying benchmark. The fund manager would also endeavour to keep minimal cash levels to keep performance deviation from the underlying ETF's to minimal.

**Liquidity Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).

Mitigation- The Scheme will invest in units of the underlying scheme which will invest in US treasury securities and the liquidity risk for these units / securities will be relatively low.

### **Risk control measures with respect to Debt Investments – i.e investment in Debt, Money Market Instruments.**

**Market Risk / Interest Rate Risk:** Changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. The price movement up and down in fixed income securities will lead to possible movements in the NAV.

Mitigation - In a rising interest rates scenario the Scheme / underlying scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent.

**Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).

Mitigation- The Scheme / underlying scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds.

**Credit risk or default risk:** It refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

Mitigation– Apart from the basic examination, management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower.

## **II. Information about the scheme:**

### **A. Where will the scheme invest –**

The Scheme will invest in Units of Axis AAA Bond Plus SDL ETF - 2026 Maturity ETF and debt and money market instruments in conformity with the investment objective of the Scheme and in terms of the prevailing SEBI (MF) Regulations. Provided that such investment will be within the limits specified under SEBI (MF) Regulations.

### **Debt Instruments & Money Market Instruments**

#### **Certificate of Deposit (CD)**

Certificate of Deposit is a negotiable money market instrument issued by scheduled commercial banks and select all-India Financial Institutions that have been permitted by the RBI to raise short term resources. The maturity period of CDs issued by the Banks is between 7 days to one year, whereas, in case of FIs,

maturity is one year to 3 years from the date of issue.

### **Commercial Paper (CP)**

Commercial Paper is an unsecured negotiable money market instrument issued in the form of a promissory note, generally issued by the corporates, primary dealers and all India Financial Institutions as an alternative source of short term borrowings. CP is traded in secondary market and can be freely bought and sold before maturity.

### **Treasury Bill (T-Bills)**

### **Debt and Money Markets in India**

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market, consists of G-Sec outstanding of Rs. 80,59,921.302cr as on Feb 28, 2022 (State Govt securities - Rs 38,31,895.100 cr, (as on Feb'21) Source: CCIL), is the oldest and the largest component (50% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call

- Tri Party Repo
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / DFI / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields prevailing on September 30, 2025 on some of the instruments and further illustrates this point.

<b>Instrument</b>	<b>Current Yield range (%)</b>
Tri-party Repo	5.40/5.45

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

The Scheme will comply with the other Regulations applicable to the investments of Mutual Funds from time to time.

13. The Scheme shall participate in repos in corporate debt securities as per the guidelines issued by SEBI and/ or RBI from time to time and the guidelines framed by the Board of Directors of Trustee Company and the Asset Management Company, from time to time.

At present the following conditions and norms shall apply to repo in corporate debt securities:

- (i) The gross exposure of the Scheme to repo transactions in corporate debt securities shall not be more than 10% of the net assets of the Scheme.
- (ii) The cumulative gross exposure through repo transactions in corporate debt securities along with shares / units of Underlying Fund, debt and money market instrument shall not exceed 100% of the net assets of the Scheme.
- (iii) The Scheme shall participate in repo transactions only in AA and above rated corporate debt securities.
- (iv) The Scheme shall borrow through repo transactions only if the tenor of the transaction does not exceed a period of six months.
- (v) The Trustee and the Asset Management Company have framed guidelines inter alia considering the following aspects:

- i. Category of counterparty
- ii. Credit rating of counterparty
- iii. Tenor of collateral
- iv. Applicable haircuts

(vi) Counterparty selection & credit rating

The counterparty must be an acceptable counterparty for debt transactions. The Mutual Fund follows a counterparty empanelment process for fixed income transactions and the same shall be used for selection of counterparties for corporate bond repos. All repo transactions in corporate bonds will be governed by a repo agreement as specified by FIMMDA and / or other specified authorities.

(vii) Collateral tenor & quality

The exposure limit/investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.

(viii) Applicable haircuts

Currently mutual funds are permitted to carry out repo transactions in government securities without any haircuts. The Reserve Bank of India has notified a minimum haircut based on rating of the corporate bond and other securities. In addition, the Fixed Income and Money Market Dealers Association (FIMMDA) would maintain a rating-haircut matrix on an ongoing basis. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.

The haircuts seek to protect the lender of funds from the event of the counterparty failing to honor the repurchase leg of the repo. In such a circumstance, the Fund would suffer a loss if the value of the collateral depreciates by more than the haircut. The fall in the value of the collateral could be on account of higher yields and/ or deterioration of credit quality.

As the typical tenor of repos is short (typically overnight), the haircuts represent a relatively high degree of safety in relation to the interest rate risk on the collateral. The risk of collateral depreciation based on historical volatility is given in the table below:

Bond Tenor (yrs)	1	3	5	10
Price Volatility (%) (annualized)	0.6	1.2	1.7	3.4
Repo Tenor	Number of standard deviations needed to lose 10%			
1 day	258	136	94	48
7 days	98	52	36	18

In the above table, the price volatility of a 10-year bond is about 3.4% annualized. That is a 10% price move represents nearly a 3-sigma event on an annualized basis. For overnight tenors, this represents a 48-sigma event (for comparison a 6-sigma event occurs about once in a million observations).

It is apparent that the haircuts stipulated by RBI are more than sufficient to mitigate interest rate risk. Credit event risk remains (the collateral could default during the tenor of the repo). This risk is to be mitigated by ensuring that the collateral is acceptable from a credit point of view.

Note: According to the Asset Allocation of the Scheme, the gross exposure of the Scheme to repo transactions in corporate debt securities shall not be more than 5% of the net assets of the Scheme.

14. The Mutual Fund/AMC shall make investment out of the NFO proceeds only on or after the closure of the NFO period. The Mutual Fund/ AMC can however deploy the NFO proceeds in TREPS before the closure of NFO period. However, AMCs shall not charge any investment management and advisory fees on funds deployed in TREPS during the NFO period. The appreciation received from investment in TREPS shall be passed on to investors.

Further, in case the minimum subscription amount is not garnered by the scheme during the NFO period, the interest earned upon investment of NFO proceeds in TREPS shall be returned to investors, in proportion of their investments, along-with the refund of the subscription amount.

The exposure limit/ investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds.

The Scheme will comply with the other Regulations applicable to the investments of Mutual Funds from time to time.

Apart from the investment restrictions prescribed under SEBI (MF) Regulations, the fund may follow any internal norms vis-à-vis limiting exposure to a particular scrip or sector, etc

All the investment restrictions will be applicable at the time of making investments.

The AMC/Trustee may alter these above stated restrictions from time to time to the extent the Regulations change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments for mutual funds to achieve its respective investment objective.
